Product Description

BW600 highlights

- Fast wrapping times
- Convenient operation and maintenance
- Airtight wrapping for optimized nutrient preservation

You are in full control with the ability to set a consistent number of wraps on each bale, adjusting the number to optimize wrap uses with the digital counter.

Control each wrap with confidence thanks to a combination of features designed to help you make adjustments, monitor, count and place wrapped bales in a straight row.

Start, stop and steer the machine from a distance or the comfort of your cab with an enhanced remote.

Maximize storage space and improve the appearance of your stored bales with an innovative system that keeps rows straight alongside walls, fences or other bales.

Reduce the risk of plastic film tearing at startup with a progressively moving hoop, which also minimizes wear on hoop-drive components for improved longevity and easier maintenance.
