Product Description

605N baler highlights

- Premium haymaking, simple operation
- Durable components for increased longevity
- High quality hay-making for high-quality producers

The durable pickup features an optional clutch that stops at the desired bale size to prevent overfilling and help protect components.

The ISOBUS-compatible E-Link Pro display offers quick access to bale weight and moisture readings, tracks data for 20 customers and 10 fields each, and provides feedback on the Auto Lube greasing system and pickup clutch control.

The optional Auto Lube greasing system automatically lubricates critical bearings at user-defined intervals, optimizing performance with high-pressure polyurea grease.
