Product Description

604 Pro G3 baler highlights

- Stay in the field when it matters most
- Bale nutrient-dense silage or dry hay
- Engineered with versatility, durability and ease of use in mind

The drop floor flexes during baling to help crop flow into the chamber with ease. If a plug does occur, operators can clear the plug from the cab so they can get back to baling.

Baling tough crops? No problem. A 540 rpm or 1,000 rpm PTO tie into a split gearbox, running the pickup on one side and the chamber on the other to help spread the load to both sides of the baler.

Operators can rest assured with 3-year pickup coverage on internal components including parts* and labor.

*Does not include teeth or hardware for teeth.

Built with few moving parts, the camless wide pickup gets the job done and helps minimize parts cost when it's time for routine maintenance.
