Product Description

504R Classic baler highlights

- Robust performance with simplicity in mind
- Built with heavy-duty components
- Convenient routine maintenance

Built with few moving parts, the 60-in (150-cm) 4-bar camless wide pickup gets the job done and helps minimize parts cost when it's time for routine maintenance.

Durable chains and heavy-duty components on the inside of the baler, including strong driveshafts, make it built to last.

A low recommended PTO of 50 hp (40 kW) provides options for various tractors.

The Atlas™ control system delivers robust performance with simplicity in an intuitive package. Track field statistics, bales per hour and average bale size on a 4.3-in (11-cm) color touch-screen display.

An optional netwrap system makes netwrap efficient to feed and operate.
