Product Description

CM295 highlights

- Exceptional efficiency and productivity? Sign me up
- Perfect for large operations who demand reliability, durability and versatile adaptation
- Add the FM110 front mower to the mix and you have a triple mower with a working width of 29.8 ft (9.1 m)

A robust, yet simple frame is strong enough to support the mower when folded, yet gives plenty of accessibility for easy hook-up so you're ready to tackle the field with ease. Blades are simple and quick to replace to help minimize downtime for replacement - plus, reversible blades offer extended usability. Choose the best option for your specific needs with options for a rubber roller conditioner, steel flail conditioner or a mower without a conditioner. An optional electric selector cuts the standard two remotes down to just one so operators can control the cutter units individually or in tandem. Hydraulic suspension on each side of the combination mower ensures excellent adaptation to the ground and a precise cut and clean forage in a variety of terrains and in all conditions.
