Product Description

BF250 highlights

- Simplicity, flexibility, affordability
- Achieve a complete and consistent ration without having a vertical mixer
- Low loading height makes it ideal for operations of multiple sizes

Low tractor horsepower requirements and a simple design make this machine a good fit for operators looking for a wagon that is simple to use and maintain.

Have versatility with a low-profile loading height. This gives you flexibility between barns and buildings and allows you to load with most skid steers.

Optimize feed placement into tires, bunks or wherever else you may be feeding with high discharge.

Two options for discharge allow customers to tailor their wagon to fit their needs. A conveyor is typically the best option for rations of up to 20% roughage, whereas an auger works well for silage, grains and supplements.
