Product Description

BF230 highlights

- Simplicity, flexibility, affordability
- Achieve a complete and consistent ration without having a vertical mixer
- Low loading height makes it ideal for operations of multiple sizes

The low 70-in (180-cm) loading height on this machine allows for clearance in different barns and buildings, as well as loading with a tractor and most skid steers.

Low tractor horsepower requirements and a simple design make this machine a good fit for operators looking for a wagon that is simple to use and maintain.

Optimize feed placement into tires, bunks or wherever else you may be feeding with high discharge.

Two options for discharge allow customers to tailor their wagon to fit their needs. A conveyor is typically the best option for rations of up to 20% roughage, whereas an auger works well for silage, grains and supplements.
