Product Description

MSC1000 highlights

- Built to last and deliver an exceptional spread day after day
- Achieve a consistent and even spread pattern with every load
- Maintaining your manure spreader is a breeze with features designed for convenience and long-lasting performance

Deliver a fine, high-quality spread day-in and day-out with heat-treated boron teeth that provide you with up to four* times more strength than traditional mild steel. *Claims of performance provided by third-party manufacturer. Individual results may vary based on care and operation of equipment, which may adversely affect performance. Strength and versatility come from a vertical lift endgate. The strong design and construction allow the endgate to be used as a grading device for light applications of materials as well as to retain runny material, so you don't spill on the road. Boron auger flighting maximizes wear resistance, extends longevity and helps your spreader withstand tough jobs. This helps minimize downtime for repairs and increase productivity for your operation. Deliver a fine, high-quality spread day-in and day-out with heat-treated boron teeth that provide you with up to four* times more strength than traditional mild steel. *Claims of performance provided by third-party manufacturer. Individual results may vary based on care and operation of equipment, which may adversely affect performance.
