Product Description

MS300 highlights

- When it comes to durability, Vermeer manure spreaders stand in a league of their own
- Achieve a consistent and even spread pattern with every load
- Maintaining your manure spreader is a breeze with features designed for convenience and long-lasting performance

Deliver a fine, high-quality spread day-in and day-out with heat-treated boron teeth that provide you with four* times more strength than traditional mild steel. *Claims of performance provided by third-party manufacturer. Individual results may vary based on care and operation of equipment, which may adversely affect performance. Boron auger flighting maximizes wear resistance, extends longevity and helps ensure your spreader withstands the toughest jobs. This helps minimize downtime for repairs and increase productivity for your operation. Heavy-duty 80-grade chain provides reliability and minimized maintenance due to its durability — because no one enjoys the hassle of digging out your manure spreader when chains break. Reliability and durability come standard with a one-piece gearbox designed for longevity and smooth performance. A sight glass in the middle of the gearbox helps make sure operators have the proper amount of oil in the system — and that it's in good condition. Deliver a fine, high-quality spread day-in and day-out with heat-treated boron teeth that provide you with four* times more strength than traditional mild steel. *Claims of performance provided by third-party manufacturer. Individual results may vary based on care and operation of equipment, which may adversely affect performance.
