Product Description

VT970 Premium highlights

- Reap all the benefits of the VT970 plus even more durability and longevity
- Nearly 1,000 ft³ (28.3 m³) in capacity plus an overlapping screw design that pulls feed from opposite chambers for a quick mixing process
- Optimize ration costs and help reduce feed waste

Optional bidirectional discharge makes feeding convenient. Feed either on the right or left side of the alley when traveling between pens or multiple buildings. Optimize rations and achieve defined targets when feeding in multiple pens with a 4-point scale. Plus, wireless connectivity makes load weights accessible from a smart device. Three points of contact with the tub floor, made up of two bi-pulse legs and the leading edge of the screw, help move material from the tub to the discharge conveyor for consistent distribution along a bunk line or tire. Achieve a consistent, thorough mix with two overlapping screws and offset baffles on the tub wall. Instead of feedstuffs remaining in either the front or the back of the tub, the tub construction encourages the material to travel between the screws. Optional bidirectional discharge makes feeding convenient. Feed either on the right or left side of the alley when traveling between pens or multiple buildings. Equipped with 3/8-in (9.5-mm) tub material and 1-in (2.5-cm) floor thickness, this mixer is built to withstand load after load.
