Product Description

VS570 highlights

- High-capacity single-screw vertical mixer
- Durable components contribute to long-lasting performance
- Optimize ration costs and help reduce feed waste

Extend machine life with a heavy-duty planetary. Optimize rations and achieve more defined targets when feeding multiple pens with a 4-point scale that helps improve accuracy compared to a 3-point scale. Heavy-duty, abrasion-resistant AR200 steel on the tub walls and floor makes this mixer ready for years of use, various feedstuffs and numerous loads. Achieve thorough cleanout at a quick rate. Two bi-pulse legs and the leading edge of the screw work together as three points of contact with the tub floor for ideal cleanout. Mix the load while traveling down the road or between pens on your farm or ranch with constant-velocity PTO. A standard folding ladder and viewing platform on the VS570 single-screw vertical mixer provides optimal visibility to the tub, compared to mixers without a platform.
