Product Description

VS510 highlights

- Durable components contribute to long-lasting performance
- Process a 6-ft x 5-ft (1.8-m x 1.5-m) round bale and mix a wide variety of feedstuffs
- Optimize ration costs and help reduce feed waste

Help extend machine life with a heavy-duty planetary. Optimize rations and achieve more defined targets when feeding multiple pens with a 4-point scale that helps improve accuracy compared to a 3-point scale. Heavy-duty, abrasion-resistant AR200 steel on the tub walls and floor makes this mixer ready for years of use, various feedstuffs and numerous loads. Achieve thorough cleanout at a quick rate. Two bi-pulse legs and the leading edge of the screw work together as three points of contact with the tub floor for ideal cleanout. Mix the load while traveling down the road or between pens on your farm or ranch with constant-velocity PTO. A low loading height of 120 in (305 cm) on this machine allows for clearance in different barns and buildings, as well as loading with a tractor and most skid steers.
