Product Description

VS350 highlights

- Small but mighty, enhance your feeding routine
- Optimize ration costs and help reduce feed waste
- Create a consistent and thorough ration with a variety of feedstuffs

An optional 2-speed gearbox allows operators to tailor their mixing speed depending on the stage of the mixing and feeding cycle. A low loading height of 106 in (270 cm) on this machine allows for clearance in different barns and buildings, as well as loading with a tractor and most skid steers. Optimize rations and achieve more defined targets when feeding multiple pens with a 4-point scale that helps improve accuracy compared to a 3-point scale. Optimize mixing speed and achieve a thorough cleanout with high-screw rpm. Achieve thorough cleanout at a quick rate. Two bi-pulse legs and the leading edge of the screw work together as three points of contact with the tub floor for ideal cleanout. A low loading height of 106 in (270 cm) on this machine allows for clearance in different barns and buildings, as well as loading with a tractor and most skid steers.
