Product Description

TM1200 highlights

- Wide cutting width, narrow transport width
- Complete, consistent cutting action
- Minimized, convenient maintenance

Cutter bars are staggered and overlap for complete cutting action down the middle.

Float over fields and contoured terrain with a nitrogen-charged accumulator flotation system that adjusts for varying field and crop conditions.

Help reduce labor and fuel by using one wide swath mower to cut more acres than multiple 3-point mowers.

Help protect your cutter bar and your field. The suspension system complements the independent cutter bars, allowing each to contour the ground and operate at different levels.

Gain easy access to the cutter bars with flip-up curtains.
