Product Description

TM105 highlights

- Convenient operation and maintenance without sacrificing premium features
- Deliver a consistent, clean cut in the field
- Smart features designed for ease of maintenance

Get back to mowing. The greaseless vertical driveline and greaseless tongue pivot features help to optimize routine maintenance to get you back in the field. Maximize productivity and minimize maintenance time with the Q3® cutter bar. Two features make it quick and convenient to replace key components — the Quick-Clip® blade retention system and Quick-Change™ shear ring. Experience full control with hydraulic pitch adjustment. If you ever need to mow above an obstacle in the field, simply bump a lever to raise the pitch using the tractor hydraulics. Achieve optimal suspension to minimize ground pressure for a clean cut across the field with a nitrogen-charged hydraulic suspension system. For varying field conditions, you can make quick and toolless suspension adjustments.
