Product Description

VRB16 highlights

- Combine durability and versatility into a cost-effective package
- Designed for optimal ground clearance
- Maximized performance in heavy crops

Experience a smooth, level ride and contour the ground in varying conditions with optional tandem wheels. Maximize your productivity with optimal clearing action and crop flow with standard 60-in (152-cm) rake wheels. Maximize machine life. A rugged, reinforced frame and heavy-duty components make this a highly durable rake for its class. Enable single-side raking in seconds without any tools by selecting either left- or right-side raking configurations. Achieve an even dry-down for center swath hay with an optional center splitter. The splitter lifts and locks hydraulically for transport and can be raised and lowered when turning tight corners. Go from raking to transporting quickly as the rake opens and closes hydraulically from the cab.
