Product Description

VRB14 highlights

- Combine durability and versatility into a cost-effective package
- Designed for optimal ground clearance
- Maximized performance in heavy crops

Avoid obstacles and optimize crop flow into the windrow with a high-capacity frame with optimal ground clearance. Maximize machine life. A rugged, reinforced frame and heavy-duty components make this a highly durable rake for its class. Enable single-side raking in seconds without any tools by selecting either left- or right-side raking configurations. Achieve an even dry-down for center swath hay with an optional center splitter. The splitter lifts and locks hydraulically for transport and can be raised and lowered when turning tight corners. Go from raking to transporting quickly as the rake opens and closes hydraulically from the cab.
